

Rich County Extension

5 Tips for Post Calving Nutrition

Reganne Briggs, Extension Assistant Professor

1. Take stock of all feed resources available before winter feeding and plan on how to use resources according the nutritional requirements of animals.
2. Take forage samples of feed. This will allow you to know if you need to supplement or decrease a certain feed.
3. Use tools such as nutrient requirement charts or ration balancing software to determine nutrient requirements of your cattle.
4. Watch cattle for change in body condition score (BCS). Cattle with lower BCS will have decreased conception rates.
5. Talk to your local county agent or specialist if you have questions.
