Nutrient Management Plan (NMP)

Concentrated Animal Feeding Operation (CAFO) General Permit UTG080000 Utah Pollutant Discharge Elimination System (UPDES)

General Instructions

- Complete this template to develop a site-specific NMP, following the Narrative Rate Approach, for submittal to the Division of Water Quality (DWQ) with a Notice of Intent (NOI) to obtain coverage under UPDES General Permit No. UTG080000 for CAFOs.
- Permit requirements are included in this template for reference and in many cases are paraphrased or summarized. The planner and CAFO owner or operator should refer to the general permit for the exact language of each requirement.
- Instructions for specific items are provided throughout the template. Those instructions can be viewed by clicking on the ? symbol.

- ✓ The location of setbacks, buffers, or other conservation practices, as identified in Section IX of this NMP.
- ✓ Fields with nutrient application limitations, as identified in Section XI of this NMP.
- \checkmark Any runoff and tail water controls.
- \checkmark Any surface water or conveyances to waters of the state.
- \checkmark Subsurface conveyances to waters of the state such as tile drain outlets.

IV. Storage of Manure and Process Wastewater

- Ensure adequate storage of manure, litter, and process wastewater, including procedures to ensure proper operation and maintenance of the storage facilities (UTG080000 IX.A.1).
 - Proper storage capacity for the required storm event shall be maintained.
 - Manure and process wastewater stored in impoundments shall be removed as necessary to maintain a
 minimum freeboard of one foot or more, in addition to maintenance of the freeboard needed for the required
 storm event.
 - When the storage capacity of impoundments is less than the volume required to store runoff from the required storm event, the structures shall be properly dewatered to a level that restores the required capacity and freeboard. During dewatering, land application sites must have holding capacity and containment to receive process wastewater.
 - CAFOs constructing new wastewater retention facilities or modifying existing retention facilities shall ensure that all retention structure design and construction will be in accordance with all applicable, current, NRCS practices and standards including <u>Utah NRCS Practice 313</u>, <u>Waste Storage Facility</u>.
- Production area required best management practices (BMPs) (UTG080000 VII.G).
 - Perform weekly inspections of all storm water run-on diversion devices, runoff diversion structures, animal waste storage structures and devices channeling process wastewater to impoundments or tanks.
 - Perform daily visual inspections of water lines, including drinking water or cooling water lines looking for leaks that could create process wastewater that would require containment or treatment of the leaked water.
 - Install depth markers in all open liquid impoundments and terminal storage tanks to indicate the maximum elevation to maintain capacity necessary to contain the facility's required storm event and freeboard. The depth markers shall be marked at a maximum of one-foot increments.
 - Perform weekly inspections of impoundments and tanks. Record the liquid elevations in the structures as indicated by the depth markers.
 - Correct any deficiencies found as a result of daily and weekly inspections as soon as possible, but no later than 30 days after identifying the deficiency, unless:
 - Factors preventing correction within 30 days have been documented.
 - Any deficiency where storage freeboard or structure integrity is insufficient to contain the required storm event, must be corrected immediately.
 - Remove accumulations of liquids, solids, and manure from impoundments and tanks as necessary to maintain the capacity for the required storm event and minimum freeboard.
 - Maintain on-site records documenting the implementation of the required BMPs. All records shall be maintained and retained on-site for five-years from the date they were generated. Records must be made available during inspections by the permitting authority or authorized agent.
 - A CAFO's production area may not be located within a 100-year flood plain, unless the production is protected from inundation damage and illegal discharges that may result from 100-year flood waters or flow.
 - There shall be no discharge of manure, litter, or process wastewater from the production area to groundwater with direct hydrologic connection to surface waters of the state.

(A) Manure, litter, and process wastewater generation and storage summary

1. The required storm event containment for the facility:

□ 25-year, 24-hour: ______ in. OR

Specify – storm return frequency: ______, storm size: ______ in.

2. Identify all structures use	ed to store solid manure, litter	; and compost. Lis	t the structure name or n	number for each:
3. Identify all structures use structure name or number	ed to store <u>liquid manure and</u> r for each:	process wastewate	<u>r</u> (including contaminat	ed runoff). List the
4. Annual solid manure/litte	er generation:			(cubic feet)

1. List below the records maintained to document implementation and management of this NMP to ensure proper management of animal mortalities to prevent discharge of pollutants to surface waters of the state.			
Record/Documentation			Frequency

VI. Diversion of Clean Water

•	Ensure that clean water is diverted, as appropriate, from the production area (i.e., corrals, pens, manure and process waster
	water storage systems, manure stockpiles, composting areas, etc.) (UTG080000 IX.A.3).

• All operations except new swine, poultry, and veal, shall prevent run-on and clean water contact with open lots, process wastewater ponds, manure, litter, compost, and other potential water contamination sources up to, and including, the 25-year, 24-hour storm event. Any clean water that contacts feed, manure, wastewater, litter, runoff, bedding, compost, mortalities, etc. must be properly contained of treated.

• All new (as of December 4, 2008) swine, poultry, and veal shall prevent run-on and clean water contact with feed, manure, litter, runoff, bedding, compost, mortalities, etc. must be properly contained or treated. No discharge of contaminated clean water is allowed.

VII. Prevent Direct Animal Contact				
• Prevent direct animal contact of confined animals with waters of the state (UTG080000 IX.A.4).				
• Waters of the state are not allowed to flow through animal confinement areas.	• Waters of the state are not allowed to flow through animal confinement areas.			
• Animals are not allowed access, including for watering purposes, to waters of	of the state.			
• New production area facilities shall not be built in waters of the state.				
(A) Measures for preventing direct contact:				
1. Do surface waters of state flow through the production area? \Box Yes \Box No				
2. Do animals have access to surface waters of the state? \Box Yes \Box No				
3. If yes to either 1 or 2, list the measures (e.g., fencing) used in the production area to prevent direct contact of animals with- surface waters of the state:				
(B) Prevent direct animal contact records

1. List below the records maintained to document implementation and management of this NMP to prevent direct contact of con- fined animals with surface waters of the state.				
Record/Documentation Frequency				

• Ensure that chemicals and other contaminants, including waste chemicals or products, handled on-site are not disposed of in any manure, litter, process wastewater, or storm water storage or treatment system unless specifically designed to treat such chemicals and other contaminants (UTG080000 IX.A.5).					
• Chemicals, products, and other contaminants such as animal dip chemicals, pesticides, cleaning and disinfection agents, foot bath chemicals, pharmaceuticals, fertilizers, fuel, oil, cooling water, etc. shall be properly handled, contained, or treated.					
(A) Chemical storage and disposal location(s):					
1. Description of chemical <u>storage</u> location:					
Check all that apply:					
\Box No chemicals are used at the facility					
Chemicals are not stored in a room with a floor drain that discharges	outside (to the production area)				
□ Storage is covered					
Storage has secondary containment					
□ Chemicals are stored in proper containers					
• Other:					
2. Description of chemical <u>disposal</u> location:					
Check one:					
\Box Chemicals are used and empty containers are disposed of in accorda	nce with manufacturer's guidelines				
• Other:					
(B) Chemical and Waste Chemical Handling Records					
• Identify specific records that will be maintained to document the implementation and management of the minimum NMP ele- ments (UTG080000 IX.A.9).					
1. List below the records maintained to document implementation and management of this NMP to ensure chemicals and other contaminants handled on-site are not disposed of in systems not specifically designed to treat them.					
Record/Documentation	Frequency				

IX. Conservation Practices

- Identify appropriate site-specific conservation practices to be implemented, including as appropriate buffers or equivalent practices, to control runoff of pollutants to waters of the state (UTG080000 IX.A.6).
 - Solid manure shall be incorporated into the soil as soon as possible after application, unless the application site has perennial vegetation (such as alfalfa) or is no-till cropped, and where the nutrient management plan adequately demonstrates that surface water quality will be protected where manure is not immediately incorporated.
 - Process wastewater applied to furrow or flood-irrigated land application sites shall be applied in a manner that prevents any process wastewater runoff into waters of the state.
 - When process wastewater is sprinkler or drip applied, the water holding capacity of the soil shall not be exceeded to create runoff.
 - Process wastewater and manure shall not be applied to frozen, snow covered, or saturated land application sites unless according to <u>Utah NRCS Practice 590, Nutrient Management</u>; <u>Utah Manure Application Risk Index (UMARI)</u>; or other NRCS practices.
 - Where applicable of the following, the greatest setback distance of land applied manure and process wastewater applies:
 - 100 feet (or 35-foot vegetative buffer as appropriate) of surface waters of the state,
 - 100 feet of domestic water supply wells,
 - Setbacks or vegetative buffers established through UMARI or NRCS practices, and
 - Setbacks otherwise required by UAC R309-600, as it pertains to drinking water source protection.

(A) Furrow and flood irrigation

1. List furrow- or flood-irrigated fields, if any:

2. Describe methods to prevent process wastewater runoff into surface waters of the state:

(B) List sprinkler- or drip-irrigated fields, if any:

(C) Application to frozen, snow-covered, or saturated ground:

- List fields that may be used for land application when frozen, snow-covered, or saturated, if necessary (i.e., UMARI indicates "Low" risk): ______
- ***Note: Only these fields are allowed manure or nutrient application when the soil is frozen, snow-covered, or saturated, if necessary, and in accordance with any UMARI-specified best management practices to reduce impact.***

(D) Setbacks implemented for each field:

(C) Protocols for Sampling Manure, Litter, Compost, Process Wastewater, and Soil Records						
• Identify specific records that will be maintained to document the implementation and management of the minimum NMP elements (UTG080000 IX.A.9).						
Refer to the list of required records in section XIV; manure and soil testing records and results are to be included in Appendix D.						
1. List below additional records, if any, maintained to document implementation and management of protocols identified in this NMP for appropriate sampling and testing of manure, process wastewater, and soil						
Record/Documentation Frequency						
L						

XI. Protocols to Land Apply Manure, Compost, Litter, and Wastewater

•	• Establish protocols to land apply manure, litter, or process wastewater in accordance with site specific nutrient manage- ment practices that ensure appropriate agricultural utilization of the nutrients in the manure, litter, or process wastewater (UTG080000 IX.A.8). In addition to the land application protocols listed below, supplementary protocols and practices may be needed at a facility:					
	• Compliance to Utah NRCS Practice 590, Nutrient Management, or director approved practice.					
	0	In association with Practice 590 or direct followed.	tor approved practice, applicable USU guidelines and protocols must be			
	0	No application of manure or process was the capacity of the soil and the agronomic shall be applied to useful crops. 	Phos	sphorus, >120	Prohibited, application of phosphorus is not allowed			
	1. Fields with phosphorus land application limitations or prohibition:					
	a. Field Name or Number b. Nutrient Application Restriction or Prohibition					

(C) Land Application and Equipment Calibration Records

• Identify specific records that will be maintained to document the implementation and management of the minimum NMP elements (UTG080000 IX.A.9).

Refer to the list of required records in section XIV and the land application area record keeping forms (Appendix E).

1. List below additional records, if any, maintained to document implementation and management of protocols identified in this NMP to land apply manure or process wastewater in accordance with site-specific nutrient management practices that ensure appropriate agricultural utilization of the nutrients in the manure or process wastewater.

Record/Documentation	Frequency

XII. NMP Permit Terms

The following must be included in the NMP and are NMP permit terms (UTG080000 IX.C). Compliance to these permit NMP terms is required.

(A) Fields for land application. All land application fields are listed below:

1. Field Name or Number	2. Latitude	3. Longitude	4. Spreadable Acres

(XII.A continued) 1. Field Name or Number	2. Latitude	3. Longitude	4, Spreadable Acres
(B) Land application timing limitations:			
Land application to saturated, frozen, or snow-covered ground is not allowed	unless according to NRCS	Practice 590 and UMARI,	or NRCS UMARI equivalent.
1. Field Name or Number	2. Nutrient Application	on Timing Limitation	

(C) Description of the land application rates:

1. Maximum amounts of nitrogen and phosphorus from all sources of nutrients, for each crop identified (lbs/acre/field).

3. Planned crops and nutrient recommendations

- Crops to be planted in each field or other uses, such as fallow fields.
- Realistic yield goal for each planned crop or use identified for each field.
- Nitrogen and phosphorus recommendation for each planned crop or other use for each field.

XIV. Recordkeeping Requirements

Identify specific records that will be maintained to document the implementation and management of the minimum NMP elements (UTG080000 IX.A.9).							
• Records must be retained and maintained for 5 years (UTG080000 XIII.A.20).							
• Records must be made available to DWQ upon request (UTG080000 XII.A.1.b).							
• The date, time, location, and individual who performed sampling, measurement, inspection, etc. must be recorded and included in the records required to be maintained (UTG080000 XII.B).							
• The records below must be maintained as applicable to the facility (UTG080000 XII.C).							
(A) Does the facility maintain the following records?							
1. \square Yes \square No \square N/A. A current copy of the NMP.							
2. Yes No N/A. A copy of Notice of Intent and receipt of permit fee.							
3. Yes No N/A. Copies of the <u>annual reports</u> (Appendix J).							
4. Yes No N/A. <u>Manure transfer records</u> (Appendix H).							
5. Yes No N/A. Records needed to document implementation of essential NMP requirements, as identified in sections IV.F, V.B, VI.B, VII.B, VIII.B, IX.F, X.C, XI.C, this section XIV, and Appendices C, D, and E of this NMP.							
6. Yes No N/A. <u>Records of mortality management</u> (Appendix I).							
7. Yes No N/A. <u>Records of overflows or discharges to surface water</u> with date, time, and estimated volume of any overflow or discharge (Appendix I).							
8. Yes No N/A. Land application records (Appendix E).							
9. Yes No N/A. Methods and protocols used to sample and analyze soil, manure, litter, compost, or process wastewater (<u>Appendix D recordkeeping forms</u>).							
10. \square Yes \square No \square N/A. Results of soil, manure, litter, compost, or process wastewater monitoring (<u>Appendix D</u> recordkeeping forms).							
11. Yes No N/A. Expected and actual crop yields (<u>Appendix E log sheet</u>).							
12. Yes No N/A. Description of the basis for determining application rates.							
13. Yes No N/A. Calculations showing the total nitrogen and phosphorus applied to each field, including sources other than manure, litter, compost, or process wastewater (<u>Appendix E log sheet</u>).							
14. \square Yes \square No \square N/A. Methods used to apply nutrients (<u>Appendix E log sheet</u>).							
15. Yes No N/A. Dates of manure application equipment inspections and calibrations (Appendix I).							
16. Yes No N/A. <u>Records of daily water line inspections</u> (Appendix C).							
17. \Box Yes \Box No \Box N/A. <u>Weekly inspections</u> of structures and impoundments (Appendix C).							
18. Yes No N/A. Weekly freeboard readings (<u>Appendix C Weekly Inspections form</u>).							
19. Yes No N/A. Records documenting corrective actions (<u>Appendix C Daily and Weekly Inspections forms</u>).							
20. Yes No N/A. Records documenting the current design of waste storage structures, including volume of solid accumulation, design treatment volume, total design volume, and number of days of storage.							
(B) Additional site-specific records, if any, maintained to document implementation and management of the minimum NMP							
elements are identified in the appropriate sections IV.F, V.B, VI.B, VII.B, VIII.B, IX.F, X.C, XI.C of this NMP. Yes No N/A							

XV. Other Permit Requirements

The following are other permit requirements relevant to operation of the CAFO and implementation of the NMP (UTG080000 XI).

• Transfer of Manure, Litter, Compost, and Process Wastewater to Other Persons.

When manure, litter, compost, or process wastewater is sold, traded, or given away, the producer shall:

- On an annual basis, maintain records showing the date and amount of manure, litter, compost, or process wastewater that is transferred.
- Record the name and address of the recipient.
- Provide the recipient the nitrogen and phosphorus content of the manure, litter, compost, and process wastewater being transferred.
- *Retain the records listed above for 5 years. See <u>CAFO Manure, Wastewater, Litter, and Compost, Transfer Form</u> (Appendix H).*
- Annual Reporting Requirements.
 - An annual report must be submitted to DWQ by April 1st for each year of permit coverage. The report covers the previous calendar year. Please see <u>Annual Report form</u> (Appendix J).
 - Annual report content:
 - Any instances of overflows or discharges to waters of the state.
 - Summary of all discharges from the production area, including the date, time, and volume.
 - The number and type of animals confined.
 - Estimated amount of total manure, litter, compost, and process wastewater generated at the facility during the previous 12 months (tons or gallons).
 - Amount of total manure, litter, compost, and process wastewater transferred to other persons.
 - Total number of acres available for land application.
 - Total number of acres where manure, litter, compost or process wastewater was land applied during the previous 12 months.
 - A summary of all manure, litter, compost and process wastewater discharges from the production area during the previous 12 months, including date, time and approximate volume.
 - A statement that the facility has a current and updated version of the NMP and that the NMP being used was approved by a certified planner.
 - The following nutrient management planning information must be included:
 - i) The crops planted and yields for each field.
 - ii) The nutrient content of manure, litter, compost, and process wastewater.
 - iii) The data used to determine maximum amounts of manure, litter, compost, or process wastewater to be land applied each year.
 - iv) Application rate determination calculations.
 - v) The amount of manure, litter, compost, and process wastewater applied to each field during the previous 12 months.
 - vi) The results of any soil testing for nitrogen and phosphorus during the previous 12 months.
 - vii) The amount of commercial/supplemental fertilizer applied during the previous 12 months to each field.
- Proper Closure of Ponds and Other Surface Impoundments.

All solid and liquid surface impoundments will be properly closed, consistent with <u>Utah NRCS Practice 360, Closure of</u> <u>Waste Impoundments</u>. For CAFOs that have ceased operation, permit coverage must be maintained until all structures have been properly closed. • Emergency Spill and Discharge Response Plan.

The facility shall develop an Emergency Spill and Discharge Response Plan. The plan shall include the requirements shown below:

- Include procedures for expeditiously stopping, containing, and cleaning up leaks, spills, discharges, or other releases both on and off the facility property.
- Require that persons who may deal with a release be trained in these procedures and have necessary response equipment available.
- Include procedures for immediate notification of emergency response agencies and regulatory agencies. Contacts include:
 - If the discharge is a threat to human health or the environment, report <u>immediately</u> to: Utah Department of Environmental Quality hotline, (801) 536-4123.
 - All discharges, report <u>within 24 hours</u> to: Utah Division of Water Quality CAFO Program Coordinator. (801) 536-4492 or (801) 536-4300.
- Required Discharge and Noncompliance Reporting.
 - Operator will notify DWQ of any discharges to waters of the state within 24 hours at (801) 536-4300. Any discharge or other noncompliance that may endanger health or the environment will be reported immediately by calling the DWQ 24-hour Hotline at (801) 536-4123
 - Unless waived by the Director, operator will also notify DWQ in writing within 5 days of any discharges to waters of the State. The written submission shall include the following:
 - Description and cause of the noncompliance.
 - Period of noncompliance, including exact dates and times.
 - *Estimated time noncompliance is expected to continue if it has not been corrected.*
 - Steps taken or planned to reduce, eliminate and prevent reoccurrence of the noncompliance.
 - Steps taken to mitigate adverse impacts on the environment or human health during the noncompliance period.
 - Reports shall be submitted to the following address:

AFO/CAFO Program Coordinator 195 North 1950 West PO Box 144870 Salt Lake City, Utah 84114-4870

Appendix A – Facility Maps

- 1. **Production Area Map(s)**
- 2. Land Application Area Map(s)

A.1. Production Area Map(s)

Attach a map or map(s) (or aerial photos or satellite images) of the facility's production area(s), labeled as described in Section III.A of this NMP.

A.2. Land Application Area Map(s)

Attach a map or map(s) (or aerial photos or satellite images) of the facility's land application area(s), labeled as described in Section III.B of this NMP.

Appendix B – Animal Waste Management (AWM) Software Data Sheets

If indicated in section IV.B or IV.C of this NMP, attach the data sheet reports from NRCS AWM software that includes the storage structure design detail requested in those sections of the NMP.

Appendix C – Production Area Records

1. Daily Water Line Inspection Records

2. Weekly Inspection Records

Appendix D – Sampling and Analysis Records

- 1. Manure, Litter, Compost, and Process Wastewater Sampling Records
- 2. Soil Sampling Records

D.1. Manure, Litter, Compost, and Process Wastewater Sampling Records

D.2. Soil Sampling Records

Appendix E – Land Application Records

Appendix F – NRCS 590 Specification Sheets and UMARI Worksheets

- 1. NRCS 590 Specification Sheets
- 2. UMARI Worksheets

F.1. NRCS 590 Specification Sheet(s)

If indicated in section XII.C.1, XII.C.3 or XII.C.5 of this NMP, attach all NRCS Nutrient Management Conservation Practice Standard (590) Specification Sheet(s) used to develop the land application rates in section XII.

F.2. UMARI Worksheet(s)

If indicated in section XII.C.2 of this NMP, attach Utah Manure Application Risk Index Worksheets completed for each field identified in the NMP. Output from an equivalent risk assessment tool may be substituted if consistent with all applicable requirements of General Permit No. UTG080000.

Appendix G – Narrative Rate Methodology Description

If indicated in section XII.C.5 of this NMP, attach the description of the methodology and data to be used to account for amounts of manure, litter, compost, and process wastewater to be land applied, including calculations, sources of data, protocols for making determination, etc., using the <u>Narrative Rate Methodology</u> <u>Description form</u>.

Appendix H – Manure Transfer Records

Appendix I – Additional Record Keeping Forms

- 1. Mortality Management Records
- 2. Overflow and Discharge Records
- 3. Discharge and Noncompliance Reporting
- 4. Equipment Inspection and Calibration Records

I.1. Mortality Management Records

I.2. Overflow and Discharge Records

I.3. Discharge and Noncompliance Reporting

I.4. Equipment Inspection and Calibration Records
