

CANAL MOSS TREATMENTS

It has almost been one full year since we lost a good man who specialized in canal moss treatments. This unfortunate incident created a real void in the ability of canal companies to deliver water to stock holders because of the constant buildup of moss in waterways.

Magnicide H is the product most often used to control moss in irrigation systems. This unique product does not interrupt the irrigation of crops, and does an excellent job in controlling submerged aquatic weeds. As a restricted-use chemical, applicators must be trained and licensed by the Utah State Department of Agriculture and Food.

Provida, a local company headquartered in Richmond, is certified to provide this service. Canal companies can contact Provida personnel at 435-760-2222 to discuss potential treatments.
