

**2003 Summer Annuals for Alternative Forage Production - Richfield, UT**

Planted June 7, 2003. Silage plots in 30-inch rows, winter forage 6-inch rows. Plot size: 2 rows X 25 ft. RCBD with 2 replications. Seeding rate: Silage-sorghums 5lbs/acre, corn 34,000 plts/acre. Winter forage-10 lbs/acre. Previous Crop: Alfalfa. 60 lbs N applied at planting. Sprinkler irrigation to germinate and 2 furrow irrigations. Harvested in October-November for Silage and May for winter forage both at a 6-inch stubble height. Crude protein and in vitro true dry matter digestibility (IVTDMD) data from Whitney, ID trial courtesy of T. Griggs. BMR = brown midrib MS = male sterile DS = dry stalk RR = Roundup Ready WX = waxy endosperm
