Wellbeing in Logan, Utah – Preliminary Survey Results

To better understand individual and community wellbeing in Utah, Dr. Courtney Flint and her students conducted public-intercept iPad surveys in 16 cities in Summer 2019. Surveys were conducted at a combination of venues including: grocery stores, Wal-Mart stores, city offices, libraries, and public events.

This is a five-year study and data collection will continue in the future. We are currently meeting with city representatives to gather input on local wellbeing and reactions to preliminary survey findings. We look forward to your input!

In Logan, we surveyed 131 people. They were strongly representative of the people of Logan, as shown in the comparison with American Community Survey estimates (collected by the Census Bureau) below. However, our survey sample did have a slightly higher proportion of females than the population estimates. We will continue to look for opportunities to conduct surveys in Logan to collect a more representative sample and increase our sample size.
