

Utah State University is installing smart irrigation controller and providing training to small scale specialty crop growers and garden centers

If you are in Cache, Davis, Utah and nearby counties and:

- Ornamental nursery grower, garden center, cut flower producers or,
- Any kind of specialty crop grower.
- Willing to switch to the smart irrigation controller full scale or on section.
- Have an existing irrigation system with valves, access to Wi-Fi where the controller will be located and have electricity to connect the controller.

Please consider participating. We will provide (free of cost):

- Replace tradition irrigation controller with a smart, evapotranspiration-based, irrigation controller for your operation, which will be for you to keep.
- Provide one on one training on using smart irrigation controller.
- Working with you on troubleshooting (if any) issues with smart controller for two growing seasons.
- With the input provided by you we will document the efficiency, water savings, ease of use and durability of each brand of SC over two growing seasons and provide it to you.

When does the program start:

- We started the program in May of 2024 and will continue until we reach our target of 120 growers.
- We will monitor the system for growing seasons 2024 and 2025.
