Ask an Expert: Four Reasons Pumpkins are the Perfect Fall Food

Pumpkins are great to use in decorating, but are just as great to use in dining. Here is why:

* Pumpkins are low in calories. One-half cup of mashed pumpkin (without salt) has 24 calories, 0 grams fat, 1 gram protein, 6 grams carbohydrates, 1 gram fiber and 1 milligram sodium.

* Pumpkins are packed with nutrients, such as fiber and beta-carotene. Our bodies use beta-carotene to produce vitamin A. Pumpkins are also rich in potassium.

* Pumpkins are versatile. You can steam, bake, boil or microwave them (if you cut slits in them) and also pressure cook them. Once cooked they can be mashed, pureed or cubed. Mashed or pureed pumpkin (either fresh or canned) can be used in muffins, biscuits and quick breads; in soups and macaroni and cheese sauce; added to chili, a smoothie, cheese balls or hummus, to name just a few. Cubed and cooked pumpkin can be used with pasta, risotto, soups, salads and casseroles.

* Pumpkins can be preserved. Once pumpkins are cooked, they can be stored in either the fridge or freezer in air-tight containers for later use.

Here are two terrific recipes that include pumpkin.
