Spotted Lanternfly (*Lycorma delicatula*)

# Upcoming January Webinars

## Revegetation Strategies for Rangelands ("Cultivating Healthy Plants" Webinar Series)

Restoration of rangelands throughout the Intermountain West has been an excitedly discussed topic for centuries. New strategies are on the rise that will help promote rangeland health and longevity, while assisting to suppress wildfire intensity and decrease frequency.

## Invasion of the Lanternflies: Response and Impact ("Invasive Species" Webinar Series)

Join us for an informative webinar about the latest research on spotted wing lanternflies (*Lycorma delicatula*). This insect was first discovered in the U.S. in Pennsylvania in 2014, and has since spread to multiple other Mid-Atlantic states. SLF poses a significant threat to the grape, tree-fruit, hardwood, and nursery industries. It also can cause damage to high-value ornamentals in home landscapes.
