BEWARE of hitchhikers

Brown Marmorated Stink Bug
Help prevent these invasive insects from hitching a ride to new locations.

The brown marmorated stink bug was accidentally introduced from Asia, and causes extensive damage to many types of ornamental plants, shrubs, trees, and fruit and vegetable crops. This pest has a mottled brown and shield-shaped body, distinct banding on antennae, legs and edge of back, and smooth and rounded shoulders. It is about 5/8 inch long.

If you see this insect, contact the Utah Cooperative Agricultural Pest Survey (CAPS) Program!

![Stink Bug Images]

Eggs are laid in masses of about 28 eggs, each of which develop a black triangle before hatching.

Circles indicate approximate size of eggs & nymphs during life cycle.

Extended University
**look-alikes**

**Brown Marmorated Stink Bug**
- distinct banding on antennae
- blunt face
- smooth “shoulders”
- single light band on legs
- shield-shaped

**Rough Stink Bug**
- no bands on antennae
- pointed face
- rough, toothed “shoulders”
- two white bands on back legs

**Western Conifer Seed Bug**
- long narrow body
- red and orange
- hind legs dilated

**Boxelder Bug**
- long narrow body
- black and red

**damage**

BMSB feeds on over 100 host plants. It is also a major nuisance pest that will invade homes during the fall and winter.
