

Controlling Ground Squirrels on the Milford Flat

Tuesday, January 27, 10:00 a.m.

Beaver County Fairgrounds, Minersville

The Townsend Ground Squirrel is taking over the farms on the Milford Flat. The problem is getting much worse each year. This year we want to try to put together a control program for the

squirrels before the alfalfa greens up. Dr. Terry Messmer, USU Extension, Wildlife Specialist, will discuss the best methods of control and we will go out to the fields and actually do some baiting. If we can get everyone that is affected by the problem to come and participate we will get better control. So call up your neighbor and tell them to come.

Refreshments will be provided by Intermountain Farmers
