

## March, 2004

### **INSECTICIDES**

- BAYTHROID (cyfluthrin) [pyrethroid] –Bayer CropScience—As a result of the IR-4 Project, they have proposed to EPA to establish residue tolerances on pome fruit, stone fruit, and grapes.
- DIAMOND (novaluron) [benzoylphenyl urea] –Uniroyal/Crompton Corporation—Registration is pending for use on apples and pears.
- DIMETHOATE (dimethoate) [organophosphate] –Cheminova/Drexel/Gowan/MicroFlo—Registration is to be cancelled on apples and grapes due to the high cost of re-registration.
- GUTHION (azinphos-methyl) [organophosphate] –Bayer CropScience—Added to their label the control of raspberry crown borer.

### **MITICIDES**

- KANEMITE (acequinocyl) [unclassified] --Arvesta—Registration on apples and pears expected in early 2004.
