

July, 2004

INSECTICIDES

- **DIAMOND/RIMON** (novaluron) [chitin synthesis inhibitor]—Crompton Uniroyal/Makhteshim Agan—EPA established residue tolerances on pome fruit at 2 ppm.
- **PYGANIC** (pyrethrum) [botanical pyrethrins]—MGK—Added to their label the use in food and non-food areas such as food processing plants, industrial sites, homes, and storage facilities. Also added to the label: apple maggots and yellow jackets.

MITICIDES

- **FUJIMITE** (fenpyroximate) [unclassified]—Nichimo America, Inc—EPA established residue tolerances on pome fruit at 0.4 ppm and grapes at 1 ppm.
- **NEXTER** [pyridaben] [unclassified]—BASF—This is a new formulation that will replace Pyramite, which is being discontinued. Nexter has the same label as Pyramite but can be used only once per season.

MISCELLANEOUS

- **BIRD SHIELD** (methyl anthranilate)—Bird Shield Repellent Corp—Added to their label the usage on apples.
