

Spring 2025

05/16/2025

Spring 2025

As warmer days and blooming landscapes signal the arrival of spring, our team has been busy deepening efforts in climate education, sustainable design, and community engagement. This season, we've welcomed new members to our sustainability team, collaborated with Indigenous communities to co-create culturally grounded climate change curriculum, and continued advancing permaculture education through hybrid workshops. From honoring traditional knowledge to promoting regenerative practices, our work this quarter reflects a shared commitment to building resilient communities and fostering lasting environmental impact across Utah and beyond.
