

Brander, R.B. 1968. A radio-package harness for gamebirds. *Journal of Wildlife Management* 32:630-632.

Abstract: A method for attaching a radio transmitter and power cell to game birds is described. Flexible plastic tubes form a harness which holds the power cell in the crop region and the transmitter between the scapulae. This design has been used for several years in telemetry studies on ruffed grouse (*Bonasa umbellus*).
